

June 9, 2026

SACRAMENTO, CA – The Alliance for Longevity Initiatives (A4LI) today celebrates the adoption of California Senate Resolution 104 (SR 104), a landmark resolution recognizing biological aging as a major driver of chronic disease and calling for greater investment in research, innovation, and policies that support healthy aging and longevity.

Introduced by Senator Josh Becker and coauthored by Senator Akilah Weber Pierson, SR 104 was unanimously adopted by the California State Senate on June 8, 2026. The resolution urges California to support research grants, public-private partnerships, and regulatory frameworks for therapies targeting the biological processes of aging. It also encourages the California Department of Public Health and California Department of Aging to incorporate the science of aging into chronic disease prevention and healthy aging strategies.

SR 104 highlights the growing burden of age-related chronic disease and the opportunity to shift health policy toward prevention and early intervention. The resolution notes that chronic health conditions account for approximately \$3.7 trillion in annual health care spending nationally, and that California's growing population of older adults will place increasing demands on the state's health care system. The resolution also encourages collaboration among California's academic research institutions, health plans, and biotechnology firms to pilot innovative interventions that improve healthspan.

"California has long been a global leader in biotechnology and biomedical research, and SR 104 recognizes the opportunity to apply that leadership to one of the most important challenges in medicine: the diseases and disabilities associated with aging," said Dylan V. Livingston, Founder and CEO of A4LI. "We are deeply grateful to Senators Becker and Weber Pierson for their leadership, as well as the researchers, clinicians, and advocates who brought this forward. This is a vital step toward recognizing aging biology as a critical area of public policy, and A4LI looks forward to building on this momentum."

A4LI was invited onto the Senate floor to join Senator Becker and legislative colleagues during the resolution's voting and unanimous adoption. This presence at the California State Capitol reflects A4LI's expanding work at the state level to translate advances in aging biology and longevity science into actionable public policy.
